

## Displaying Goal Attainment Scale Data

Below are three options for visual displays of Goal Attainment Scale data. The first two use the same data to summarize the goal completion of secondary special education teachers over a nine month period. They provide a snapshot of the overall effectiveness of the professional development that they received. While each teacher created his/her own goal, they were all reviewed by the evaluator to ensure that each one would enhance schools' ability to meet the Indicator 13 requirements of the State Performance Plan.

The third graph would be ideal for implementation and sustainability goals implemented over multiple years. As an evaluator, it's easy to tell if a team is continuing to flourish or if additional support is needed.
