Defining the Need

- Survey representing large sample of students with significant cognitive disabilities ($n=38,038$)
- 23% used aided augmentative and alternative communication (AAC) or sign language
 - 70% of aided AAC users and 84% of sign language users used only single symbols or signs for a restricted range of purposes.
- 9% were reported to have no symbolic system of communication
 - 45% used conventional gestures, 15% used unconventional gestures, 40% used reflexive, rather than intentional behaviors

Targeting students who

- do not have flexible, symbolic means of communication
- are not reading with comprehension beyond beginning levels
- are not interested in reading
- only read because others make them
- are passive learners
- avoid interaction

The Right to Instruction

All students have the basic right to ongoing instruction aimed at developing communication and literacy skills.

NO
Prerequisites

Teachers have the potential to increase dramatically the frequency of daily communication and literacy instruction and learning opportunities.

Implementation Model Components

Professional development modules

Instructional planning guides

Self-reflection & observation checklists

Universal Core vocabulary

Quick start references & FAQs

Success stories & research references

Instructional Coaches

- Facilitate the delivery of professional development
- Support instructional planning and implementation
- Engage teachers in reflection and constructive discussions
- Do not need to have expertise in AAC, literacy, or severe disabilities

Professional Development Modules

- Series of professional development modules in two formats:
 - (1) Facilitated group learning and discussion
 - (2) On-demand, self-directed learning
- Each module between 30-60 minutes to complete.
- 12 Modules for Project Core
- 7 Modules for Tar Heel Shared Reader (expect revisions before fall 2020)

Roles: Completion of Self-directed Modules

(n=7,766, Project Core, open access to all)

Instructional Planning Guides

Planning guides detail content and what is required to implement the communication and literacy instructional practices.

Self-reflection & Observation

Evidence	Consistently	Occasionally	Never
ALL students have access to their own personal communication system with core vocabulary.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Adults recognize and respond to student's efforts to communicate. <i>Example: Adult sees a student reaching for something and provides access to it.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Adults tell students very clearly what they did to communicate. <i>Example: Adult says, "I see you reaching. You want that."</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Adults show students how to communicate using symbols. <i>Example: Adult points to the symbol for want while saying, "You could tell me, want."</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Adults show students how to use core vocabulary using each student's personal communication system (or a system that is very similar).	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Adults encourage students to communicate in any way they can.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Adults invite students to use their core vocabulary system, without requiring use. <i>Example: Adult says, "tell me" and gestures to the student's communication system.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Adults provide wait time for students to initiate and respond.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Adults use strategies other than physical support (e.g., hand-over-hand) to encourage student communication.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
